

For more than three decades, Ellis Eye & Laser Medical Center has been known for our pioneering efforts in LASIK laser vision and refractive surgery. However, many patients are unaware that we also now have an affiliate brand – Cosmetic Laser Medical Center – that can help you LOOK YOUNGER and FEEL BETTER.

As we age, our skin ages as well - especially around our eyes, lips, and face. As our eyelids begin to appear saggy and droopy, this condition not only makes you look older than you feel. It can also affect your peripheral vision. However, wrinkles of the face and eyelids can be treated.

Fortunately, we offer new procedures that can help reverse the aging process. Among these procedures is **Fractional CO₂ Laser Treatment.** Fractional CO₂ Laser Treatment provides laser energy to the layers of the skin, including the collagen, which helps to firm the collagen and significantly reduce wrinkles leading to a beautiful and youthful appearance. We are proud to have the very finest and latest Fractional CO₂ Laser in our clinics and can perform Fractional CO₂ Laser Treatment as a come and go procedure.

LASER
MEDICAL CENTER

Rejuvenate Your Skin

To make you more comfortable during your procedure, we start by merely applying a numbing cream for approximately 30 minutes to the areas being treated. Patients report minimal discomfort during the procedure, which only takes a few minutes to complete. The best news regarding Fractional CO₂ Laser is the beautiful appearance that often occurs after several days as the collagen in the skin is firmed and helps to reduce wrinkles and frowns.

Our Cosmetic Laser Center also offers **Botox** and **Juvéderm** treatments, two of the most proven and endorsed cosmetic procedures. Botox reduces facial wrinkles through an injection and is a relatively quick and simple outpatient procedure. Whereas, Juvéderm is an injection which targets and fills the long lines found around the mouth, which are almost always present as people age. **Lip Augmentation** is a cosmetic procedure that can give you fuller, plumper lips. These days, an injectable dermal filler is the most commonly used method of lip augmentation. Patients have been de-

lighted with the results seen – often within a matter of days – and the long-term results following the Botox and Juvéderm application have been outstanding. We also offer **Latisse**; an F.D.A. approved prescription treatment for fuller eyelashes.

To learn more, please call us at **1-888-CLC-LOOK (1-888-252-5665)** to speak with our patient counselor, e-mail us at **patientservices@cosmeticlasermedicalcenter.com** or visit us at **www.cosmeticlasermedicalcenter.com/**

We look forward to the continuation of our success in both the ophthalmology and cosmetic industries and hope to see you in our clinics soon!

Sincerely yours,

William Ellis
